Bowen Chen

PhD Candidate, Kansas State University

Declarations

1. The fact that I teach R does NOT imply any of the followings:

    (1) I am the best R programmer in the department;

    (2) I am an R expert (but I am good at it).

2. Please avoid making the following argument:

    – 'This is how you can do it in R.'

    – 'Nope, sir. **Bowen told us to do it in this way**.'

    – Or 'It makes no sense, **this is not what Bowen showed us.**'

3. I have no business interests in doing the tutoring. This is a free community service.

Plans Ahead

- Session 1: Basic R codes (please forget about 'command' during R sessions);

- Session 2: Data wrangling;

- Session 3: Data visualization.

- We go through the note that I wrote. The note is available at GitHub.

- FYI, economic modeling and econometric analysis are not covered.
